

## ACCESORIES

Steam Jackets, Purge Connections, Fugitive Emission & Actuation

Leeds Valve are world leaders in the manufacture and supply of butterfly valve solutions for niche applications in many diverse industries including oil and gas, LNG, power generation, industrial gas and naval marine, in materials from carbon steel to aluminium bronze, stainless steel and titanium.

### Steam Jackets

Where the flow of highly viscous fluids is undertaken the fluid must be maintained in a state where it will pass through the valve. Valves may be fitted with specially designed steam jackets which will maintain the temperature for optimum flow.

### Purge Connections

Isolating and lubricating valves and purge connections can be fitted as required.

### Fugitive Emission

Low emission packing and live loaded packing can be fitted to ensure the valves meet the current fugitive emission requirements.

### Actuation

Actuator packages with full instrumentation can be designed and provided to comply with any control system.

Pneumatic, electric, hydraulic and electro hydraulic systems are available.

Free issue actuators are welcome and valves to use existing units with shafts and adaptors to suit are regularly supplied.
